Let's Start!

Pronunciation Spot: Training staff takes preparation!

Learning Outcome

Identify and describe rules and obligations through a wider range of language and expressions in both work and social contexts.

Can Do Statements

- I can say words with silent syllables.
- I can give a structured oral presentation.
- I can give advanced training.

Ask your partner:

- Have you ever trained someone?
Would you like to? Why or why not?
- How do you think you should prepare when training someone?

Let's Explore!

Miranda gives a presentation and makes some **comparisons***. What are they?

* When you make a "comparison" you look at how similar or different two things are.

Instructions: Read the text aloud.

Today's staff training is on business crisis management. I have looked at several models for explaining the cycle that occurs when businesses deal with crisis. It is important to remember that the pattern is cyclical. An active and growing corporate business will continue to face and deal with challenges. I would like to use a medical comparison for understanding the crisis cycle. For success, it is as important to manage the health of a business as to manage personal health. Managing health means living in a way that prevents disease. The first step to crisis management is actually working to prevent problems.

Yet on average, people have a lot of contact with viruses. Healthy people can get sick just as often as good businesses face problems. When this happens, we move to step two: experiencing symptoms. The symptoms of an illness are as informative for a sick person as warnings of a problem are informative to a business.

Now comes step three: diagnosis, or identification. It is as important to diagnose an illness for the right treatment as to identify the business problem for the right solution. Generally, this is a time of shock. Emotional pain may be felt as intensely in a business as physical pain is experienced by a sick person. Since pain is high, we may logically assume this is the most difficult stage in our work. Interestingly, this pain is not as difficult as the next stage. Now, when you're comfortable after your short break, please spend a moment thinking about why this may be.

Let's Practice!

Can you identify the words with silent syllables in Miranda's presentation?

Instructions: Read the sentences. Select all the words that have a silent syllable. Read them aloud. Check your pronunciation with your instructor.

1. Today's staff training is on business crisis management.
2. I have looked at several models for explaining the cycle that occurs when businesses deal with crisis.
3. An active and growing corporate business will continue to face and deal with challenges.
4. On average, people have a lot of contact with viruses.
5. Generally, this is a time of shock.
6. Since pain is high, we may logically assume this is the most difficult stage in our work.
7. Interestingly, this pain is not as difficult as the next stage.
8. Now, when you're comfortable after your short break, please spend a moment thinking about why this may be.

Let's Practice!

Let's go through a structured presentation!

Instructions: Read the sentences. Select the words from the box to complete the structured presentation. Practice with a partner saying the sentences aloud. Correct each other's pronunciation.

Word Bank

as important / as / remember / comparison / step two / first /
crisis management / cyclical / models / step three

1. Today's staff training is on business _____. I have looked at several _____ for explaining the cycle that occurs when businesses deal with crisis.
2. It is important to _____ that the pattern is _____. An active and growing corporate business will continue to face and deal with challenges.
3. I would like to use a medical _____ for understanding the crisis cycle. For success, it is _____ to manage the health of a business _____ to manage personal health.
4. Managing health means living in a way that prevents disease. The _____ step to crisis management is actually working to prevent problems.
5. Yet on average, people have a lot of contact with viruses. Healthy people can get sick just as often as good businesses face problems. When this happens, we move to _____: experiencing symptoms. The symptoms of an illness are as informative for a sick person as warnings of a problem are informative to a business.
6. Now comes _____: diagnosis, or identification. It is as important to diagnose an illness for the right treatment as to identify the business problem for the right solution.

Extension Activity

Make some comparisons!

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Think of a business task that is important to do regularly.
- Exchange topics with your partner and write down an analogy of something outside the workplace that is equally important.
- Write a sentence of comparison using the as ... as ... construction.
- Return your paper to your partner and write 3 steps of your task which can be compared to the analogy, using the as ... as ... construction.
- Order the steps to your task creatively and include words with silent syllables.
- Read your tasks aloud to your partner and see if you can pick out the words with silent syllables.

Self-Assessment

Yes

No

I compare a business task to another task more familiar to someone outside my workplace.

☐ ☐

I make comparisons.

☐ ☐

I recognize words with silent syllables.

☐ ☐

I pronounce words with silent syllables naturally.

☐ ☐

Target Words

- **model** (noun): an example that could be copied
e.g. I have looked at several models for explaining the cycle that occurs when businesses deal with crisis.
- **cyclical** (adjective): repeating itself, occurring in cycles
e.g. It is important to remember that the pattern is cyclical.
- **to assume** (verb): to believe something is probably true even if you don't have all the facts
e.g. Since pain is high, we may logically assume this is the most difficult stage in our work.
- **generally** (adverb): most of the time; in most ways
e.g. Generally, this is a time of shock.
- **on average** (expression): the usual amount of something; usually
e.g. Yet on average, people have a lot of contact with viruses.
- **logically** (adverb): based on clear reasoning
e.g. Since pain is high, we may logically assume this is the most difficult stage in our work.

Learning Points

Making Comparisons

If you are giving advanced training or explaining a subject that is unfamiliar to people, you may want to compare it with a subject that is familiar. This is the purpose of an analogy. It is very helpful when training people in something new and unfamiliar.

We often use the grammatical construction of *as ... as ...*

An analogy is used when we compare something that is familiar to people with something that is less familiar, to help them understand the less familiar thing.

Example:

1. *Reading Ted's handwriting is as simple as reading ancient Egyptian hieroglyphics.*

(people may not know Ted or how bad his handwriting is, but most people know they cannot read ancient Egyptian hieroglyphics)

The same sentence can be reworded with the verb inside the *as ... as ...* construction. If the verb, object or phrase of the second clause is identical to the first clause, it is not repeated because it is understood.

2. *Ted's handwriting is as simple to read as ancient hieroglyphics* (understood: *... is not simple to read*) .

Examples:

- *It is as important to manage the health of a business as to manage personal health.*
- *Emotional pain may be felt as intensely in a business as physical pain is experienced by a sick person.*

Learning Points

Silent Syllables

Spoken English may be harder to understand when someone is speaking quickly because the syllables of some words may not be pronounced as they are *glided* over. These are called **silent syllables**. They occur in pronunciation when *unstressed vowels* are not pronounced.

Written Word	Silent Syllable	Spoken Word
several	several	sev'ral
generally	generally	gen'rally
comfortable	comfortable *note changes with 2 unstressed syllables	comfterble
corporate	corporate	corp'rate
interestingly	interestingly	int'restingly
business	business	biz'ness
comparison	comparison	compar'son
accidentally	accidentally	accident'llly
average	average	av'rage
