Let's Start!

Dealing with a crisis!

Learning Outcome

Identify and describe rules and obligations through a wider range of language and expressions in both work and social contexts.

Can Do Statements

- I can talk about jobs and work.
- I can use language techniques to organize points in an argument.
- I can talk about goals and purposes.

Ask Your Partner:

- Is a small crisis much easier to deal with than a big one?
- How does dealing with small crises prepare you for bigger ones?

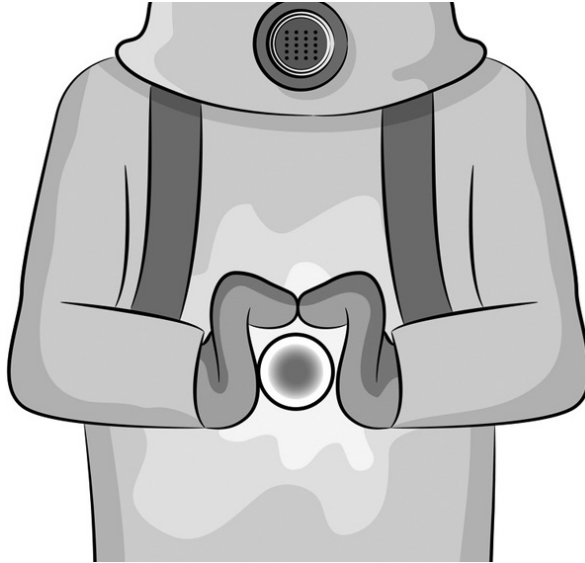

Let's Explore!

First things first*.

* The expression "*first things first*" means to start with important matters and then move on to less important ones.

Instructions: Read the text aloud.

The first step to Crisis Management sounds easy: do not have one! Many avoidable crises happen because preparation has not been done. We want to learn through mistakes to avoid similar problems in the future. Now, let's say that a problem comes to our attention. This is the second step, the stage of detection.

Detecting the problem early is very important. We respond immediately and move to step three: containment of the problem. A quick and appropriate response for damage control is necessary to prevent the problem from getting worse. Fourth, a solution must be found to deal with the problem. This is about recovery. This step is usually the longest but one must remember that it is near the end.

If the answer were quick or easy, it would not have been a crisis in the first place. Finally, once the problem has been resolved, we need to learn from the incident. A crisis brings learning opportunities. It enables us to manage small challenges before they become bigger ones. And so we come back around to the first step in preparing to avert the next crisis.

Let's Practice!

How to get out of hot water*.

*To be in "hot water" means to be in trouble.

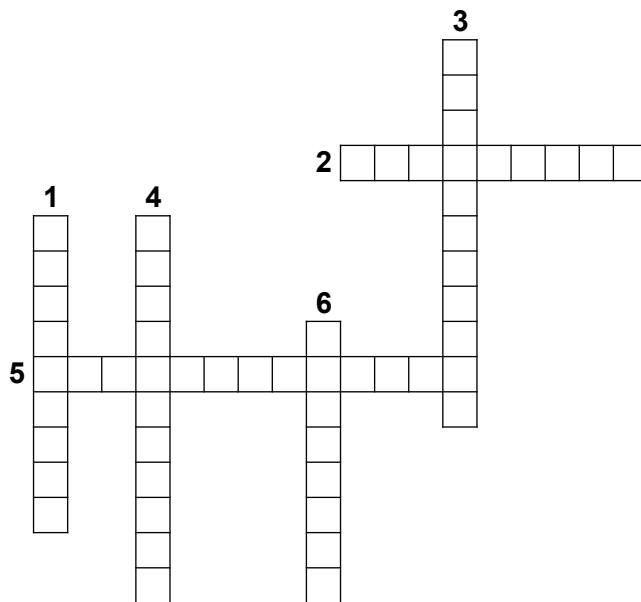

Instructions: Read the phrases. Complete the crossword with words relate to crisis management.

Down

1. Many _____ crises happen because preparation has not been done.
3. We respond _____.
4. Step three is _____ of the problem.
6. Once the problem has been resolved, we need to learn from the _____.

Across

2. _____ the problem early is very important.
5. A quick and appropriate response for _____ is necessary.

Let's Practice!

Miranda gets her ideas in order.

Instructions: Organize the mystery sentences. Read the sentences aloud. Check your pronunciation with your instructor.

1. is / prevent / . / the / worse / response / quick / A / necessary / getting / problem / from / to
2. to / be / with / must / found / . / deal / A / the / solution / problem
3. become / . / enables / to / before / ones / manage / us / challenges / small / bigger / they / It
4. to / back / preparing / Come / the / . / the / first / step / next / in / to / avert / crisis / around

Extension Activity

Plan a course of action.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Imagine a task at work that needs doing and write it down.
- Write down any steps that need to be done in point form, using infinitives.
- Exchange your task with your partner.
- Order each other's steps using a variety of different sentence and language structures.
- Read your tasks aloud to your partner.

Self-Assessment

Yes

No

I plan what things need to be done for a task.

☐ ☐

I present tasks that need doing.

☐ ☐

I use a variety of language techniques to order a work mate's plan of action.

☐ ☐

I read my plans aloud to a partner.

☐ ☐

Target Words

- **avoidable** (adjective): possible to stay away from; preventable
e.g. Many avoidable crises occur because preparation has not been done.
- **to detect** (verb): to notice something that is not obvious
e.g. This is the second step, the stage of detection.
- **immediately** (adverb): right away
e.g. We respond immediately and move to step three.
- **containment** (noun): the action of keeping something harmful from happening or getting worse
e.g. Step three is containment of the problem.
- **damage control** (noun): action taken to limit the harmful effects of something
e.g. It is important to prevent the problem from getting worse so a quick and appropriate response for damage control is necessary.

Learning Points

Infinitives of Purpose

Explaining how to do something means using verbs for the actions that must be carried out. These are called infinitives of purpose.

You use the structure:

verb + Infinitive

to explain why you do something.

Infinitives of purpose answer the question "Why?"

For example:

We want to learn through mistakes to avoid similar problems in the future.

Here, you can ask the question "Why?"

We want to learn through mistakes.

Why?

To avoid similar problems in the future.

Examples:

- *A quick and appropriate response for damage control is necessary to prevent the problem from getting worse.*
- *Fourth, a solution must be found to deal with the problem.*
- *It enables us to manage small challenges before they become bigger ones.*
- *And so we come back around to the first step in preparing to avert the next crisis.*

Learning Points

Organizing Points in an Argument

While numbering points is one clear way to organize an argument, there are various ways of wording a sequence of steps. Using the same wording for each step may sound stiff or unnatural so a variety of sentence structures are often used.

Look for the clue in each sentence which shows which stage of the argument you are reading.

Variations:

First, ...

The first step / thing / stage ...

This is step / number / level / one.

Moving to step two, ...

Then ...

This leads us to the second idea ...

... and move to step two:

And third ...

After that, ...

And finally ...

Note: 'And' is only used to precede the last step or idea.

Examples:

• *The first step to keeping a house clean is to prevent it from getting dirty. For instance, you might remove your shoes before entering a room. But sometimes you notice that dirt has gathered anyway. This is the second step: seeing the need to clean. We notice the problem and move to step three: responding immediately. Stop whatever it is you were doing to attend to the mess. Fourth, analyze the situation. What supplies are needed for cleaning? And finally, just get dirty and do your cleaning!*
